# Les étapes d'une revue systématique

# Exemple pratique

## Titre de la revue systématique

*Co-located and integrated inter-professional practices for patients with chronic conditions in primary care*

# Exemple pratique

## Objectifs de la revue systématique:

- 1) Describe co-located and integrated inter-professional practices in primary care targeting patients with chronic conditions.
- 2) Evaluate the effectiveness of co-located and inter-professional practices in primary care targeting patients with chronic conditions.

# Exemple pratique

**P** : Patients with chronic diseases (single or multiple).

**I**: organizational and professional interventions aiming to: implement or adapt co-located and integrated inter-professional practices; describe co-located and integrated inter-professional practices in primary care sought to manage patients with chronic diseases; and evaluate their outcomes

**C**: No co-located and integrated inter-professional interventions

**O**: Patients (health behaviour, self-efficacy, self-management, disease specific outcomes, quality of life, etc.); health care services (health services costs and utilization, etc.); healthcare professionals outcomes (satisfaction, work load, health status at work, etc.)

# Exemple pratique

**S:** Experimental designs, quasi-experimental designs, observational designs, mixed designs

- Database: PUBMED/MEDLINE
- The literature search will focus on publications published in English and French from 2000 to consider only most recent health reforms;
- References lists of identified studies and any review articles found will be screened;
- Additional manual search of relevant journals for integrated care given the variety of key words used for indexing (Journal of Interprofessional Care, International Journal of Integrated Care)
- Grey literature (Google Scholar, Pro Quest Dissertation and Theses; published reports).
